

WHAT MAKES MOBILITY XE® DIFFERENT?

KEY POINTS FOR COMPARISON

Mobility XE Mobile VPN resolves the unique challenges of mobile environments. Built specifically for a highly mobile workforce, it provides seamless and persistent connections no matter what combination of networks are used. It is the industry's leading mobile VPN for a reason: it provides the highest level of functionality, features and security on the market.

Compare Mobility XE for yourself against other mobile VPNs:

ELEMENT	WHAT MAKES MOBILITY XE DIFFERENT
Technology Leadership	<p>Mobility XE solves the fundamental problem of poor application performance in mobile environments. Over the past decade, our innovative approach and ability to adapt to changing technologies has helped organizations throughout the world achieve greater success in their mobile deployments.</p> <p>Mobility XE was the first mobile VPN with traffic shaping, link optimization, policy management, network access control and analytics.</p>
Market Leadership	<p>According to a recent research study from analyst firm Frost & Sullivan, Mobility XE has the largest share of the mobile VPN market (16.5%). Mobility XE has more than twice the share of the majority of Mobile VPN players, including Radio IP, SmithMicro, Columbitech, Birdstep, Check Point, NCP and IBM.</p>
Customer Satisfaction & Market Share	<p>96% of all Mobility XE customers renew their licenses every year.</p> <p>And in satisfaction surveys, 99% of customers say they Strongly Agree or Agree that “Mobility XE provides good value”.</p> <p>Over 670,000 workers in more than 2,400 organizations use Mobility XE. The reason is simple: Mobility XE works exactly the way it needs to, and continues to deliver what customers need to increase the business value of their mobile deployments.</p>
Management Console & Policy Management	<p>Mobility XE not only helps mobile workers do more every day, but it also provides IT administrators with a unique and robust management console. The console provides a level of command and control no other mobile VPN offers, including access to a reporting Analytics Module, a Network Access Control module and an innovative Policy Management module which allows administrators to set and control a number of parameters. Do other VPNs control all this?</p> <ul style="list-style-type: none"> • Bandwidth usage • Access to individual hosts/networks/subnets by specific applications/devices/users • Network protocols allowed on a specific network • Priority for traffic, based on applications and networks used
Network Aware Traffic Control	<p>Mobility XE policies adapt to the type of network so that inappropriate traffic doesn't flow over expensive or slow networks. Others have some policy capabilities, but it's not necessarily network-aware -- it's either on or off. Mobility XE controls costs for expensive bandwidth, and keep inappropriate traffic from running over slow networks that bog down the device and drain productivity.</p>

ELEMENT	WHAT MAKES MOBILITY XE DIFFERENT
Supported Networks	Mobility XE isn't tied to a specific type of network equipment, or a specific type of network. If you're using TCP/IP networks, then Mobility XE will work on them.
Traffic Shaping	Because Mobility XE controls all the traffic end-to-end, its Quality of Service capability, giving priority to specific applications, doesn't rely on support from the network operators. It works across any combination of networks, 2G, 3G or 4G, and includes next-generation LTE networks, whether public or private.
Technical Disclosure	Others say they have application persistence, single sign-on or security capabilities, but it's not clear how well it works and they don't publish the specifics. Ask for documentation. NetMotion Wireless openly publishes technical documents about how Mobility XE works.
Common Criteria EAL4+ Certification	Mobility XE received this internationally recognized certification for security and capabilities at the highest level available for a software product. Nobody other than Cisco has achieved it.
Business Results (ROI)	<p>Customers don't just say that we resolved their problems with their mobile environments. They say that we radically changed the value of their mobile environments and produced real ROI for their organizations.</p> <p>Reduction in support costs</p> <p>"Before the Mobility XE pilot we were facing 90-plus trouble tickets a month. At the end of six months, we were down to almost nothing." – <i>Allina Homecare</i></p> <p>Increased productivity</p> <p>Reliable access directly from customer sites gives each mobile sales manager an extra hour per day to spend in the field — a total of 1.1 million more hours of productive selling time with customers. – <i>US Foods</i></p> <p>Overall improvements and cost reductions</p> <p>AT&T reported a 1.8 times increase in jobs performed per day, a 54% decrease in overtime and a 43% reduction in expenses. – <i>AT&T</i></p> <p>Viability of the business</p> <p>"We had to solve the data communication issues so nurses could focus on patient care. Each nurse was seeing five or six patients a day and we needed to increase it to nine a day. We got there. The turning point was when we installed Mobility XE." – <i>Allina Homecare</i></p>
Trial Offer	Mobility XE simply works. But you don't need to take our word for it. You can try it for free, for 30 days without obligation, in a test environment or actual production. Try it against your current VPN and test the difference.
